Reduce HTTP Requests

```
<!-- STYLE SHEETS -->  
<link href="css/reset.css" rel="stylesheet">  
<link href="css/small-default.css" rel="stylesheet">  
<link href="css/medium.css" rel="stylesheet">  
<link href="css/large.css" rel="stylesheet">
```

This page has 4 external stylesheets. Try combining them into one.

Decreasing the number of components on a page reduces the number of HTTP requests required to render the page, resulting in faster page loads. Some ways to reduce the number of components include: combine files, combine multiple scripts into one script, combine multiple CSS files into one style sheet, and use CSS Sprites and image maps.
